

# ASTRON

Netherlands Institute for Radio Astronomy

## The Square Kilometre Array

### *Big Science for Global Astronomy*

**Michael Wise**

*Head, ASTRON Astronomy Group*

Symposium on the Connecting Strength of Big Science  
ILO-net, Neth-ER, Brussels, June 8, 2017

ASTRON is part of the Netherlands Organisation for Scientific Research (NWO)

**LOFAR**

## The Square Kilometre Array

### Talk Outline

*SKA and Data Intensive Astronomy*  
*Global Analysis Infrastructure for SKA Science*  
*Challenges and Boundary Conditions*  
*Experience, Observations, and Open Questions*

JVLA

ALMA

LOFAR

TMT

E-ELT

SKA

Euclid

FAST

LSST

JWST

CTA

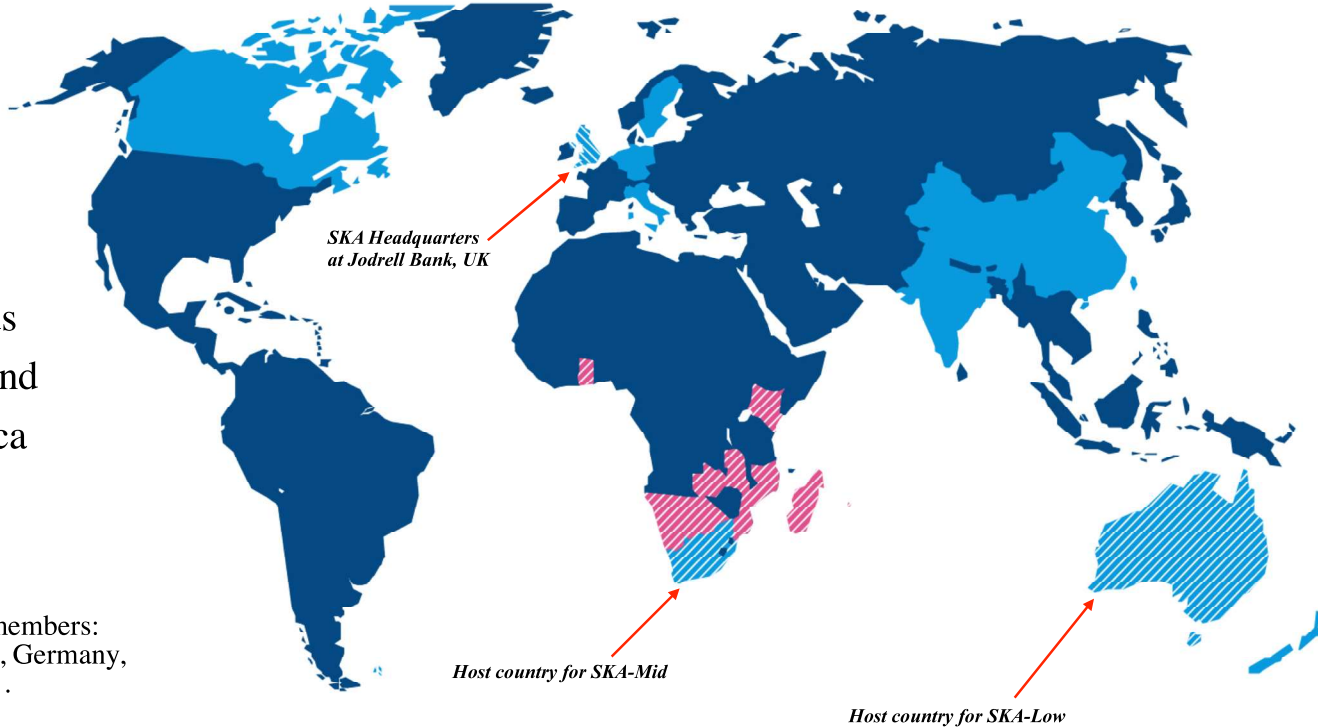

- Science is increasingly driven by large data sets
- Massive data collections and large scientific collaborations
- Most science extraction is based on the archived data
- Current instruments already producing petascale datasets

***New science infrastructures will produce exascale data!***

- Australia
- Canada
- China
- India
- Italy
- Netherlands
- New Zealand
- South Africa
- Sweden
- UK

Potential new members:  
Spain, Portugal, Germany,  
France, others...

**The First Stars**

**Cosmic Evolution**

**Cosmic Magnetism**

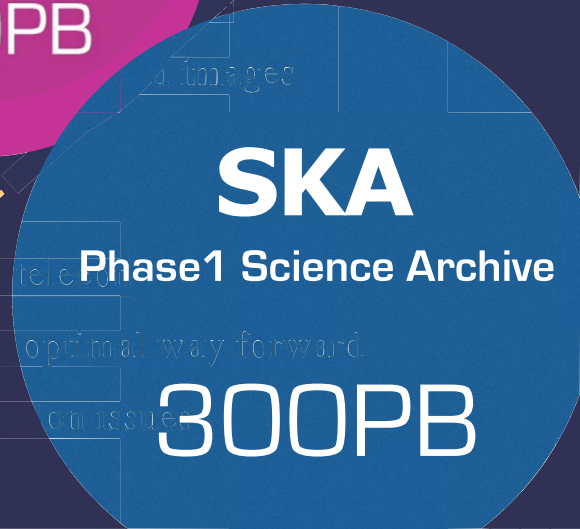

**Gravitational Physics**

**Origins of Life**

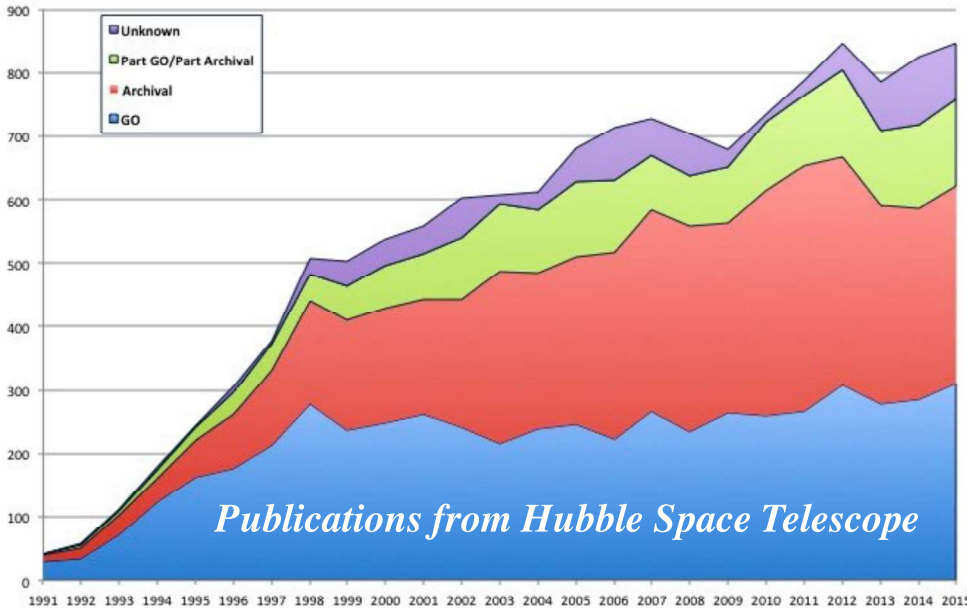

# Future SKA Science Archive

PER YEAR  
1 Petabyte

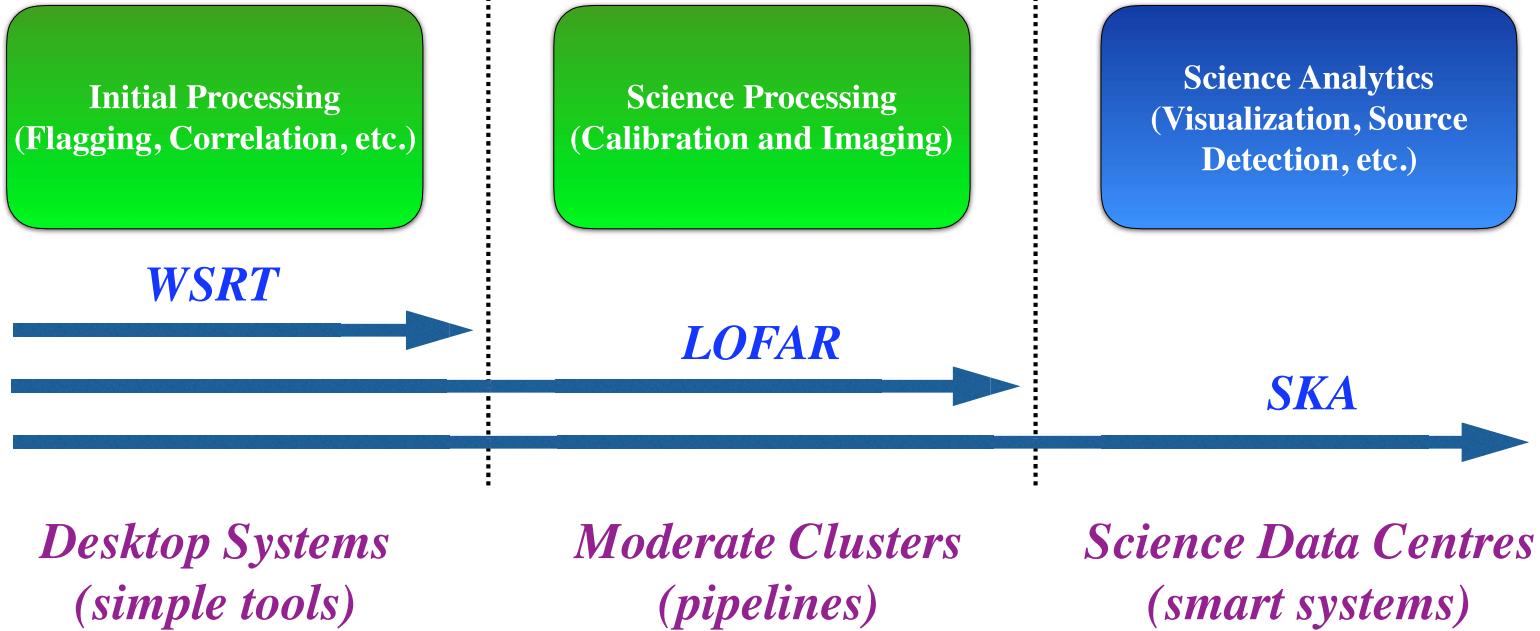

2017  
2024

## *Science archives are a multiplier for total science output*

- Assumes the archives are persistent and maintained
- Assumes archival data is open and accessible to users
- Assumes data products stored are appropriate for general use
- Assumes users retrieving data have resources to process to a science result

# Detection, Classification, Inference

*Automated detection and calculation  
of galaxy rotation curves in HI surveys*

ASKAP HI Cube (Jurek et al. 2010)

SKA cube  $\sim 0.9$  PB

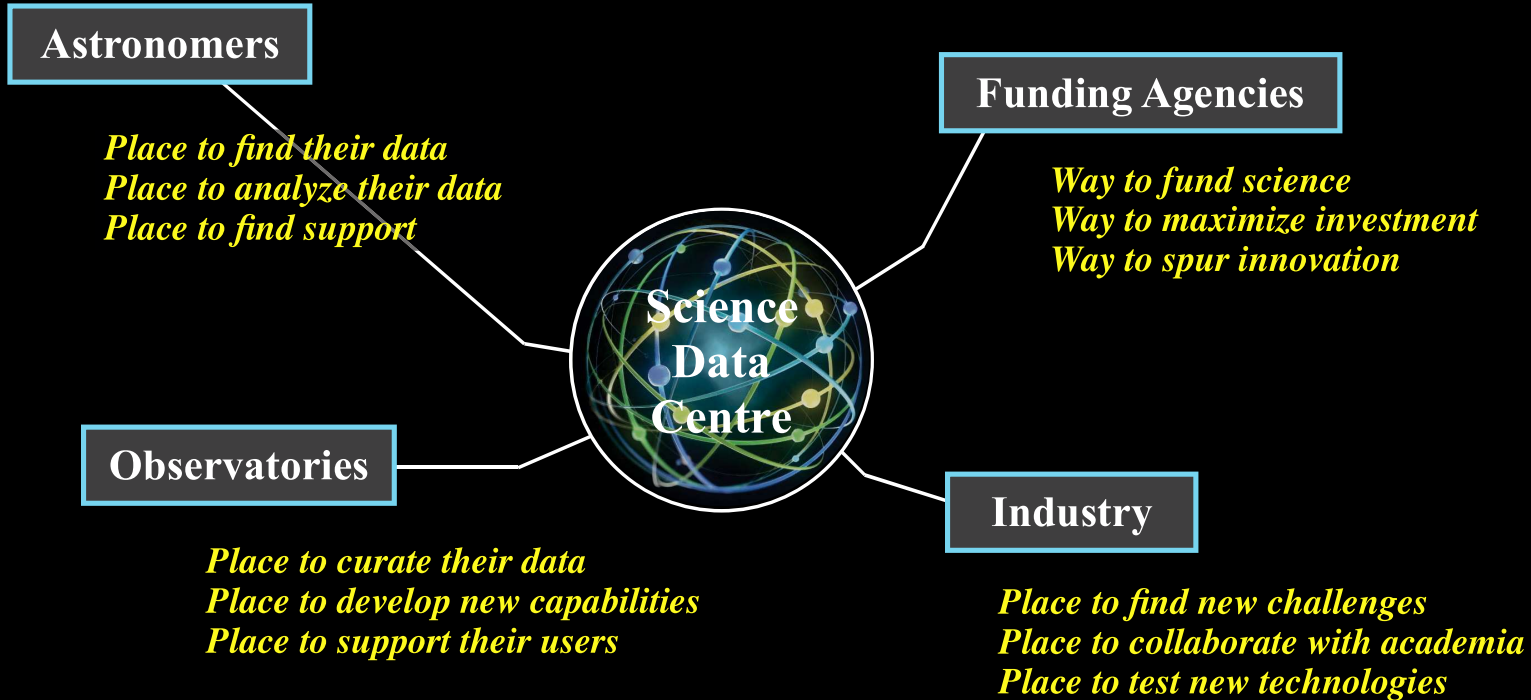

- SKA Regional Centres (SRCs) will host the SKA science archive
- Provide access and distribute data products to users
- Provide access to compute and storage resources
- Provide analysis capabilities
- Provide user support
- Multiple regional SRCs, locally resourced and staffed

*Primary interface for SKA data analysis*

# What is a Science Data Centre?

# Connections Beyond Astronomy

*Academic partnerships*

*Different research communities*

*Multiple data collections*

Pipelines

*Technology development*

*User support*

Valorization

*Industry partnerships*

Advanced European Network of E-infrastructures  
for Astronomy with the SKA

*Design and specification of a distributed, European Science Data Centre (ESDC) to support the pan-European astronomical community in achieving the scientific goals of the SKA*

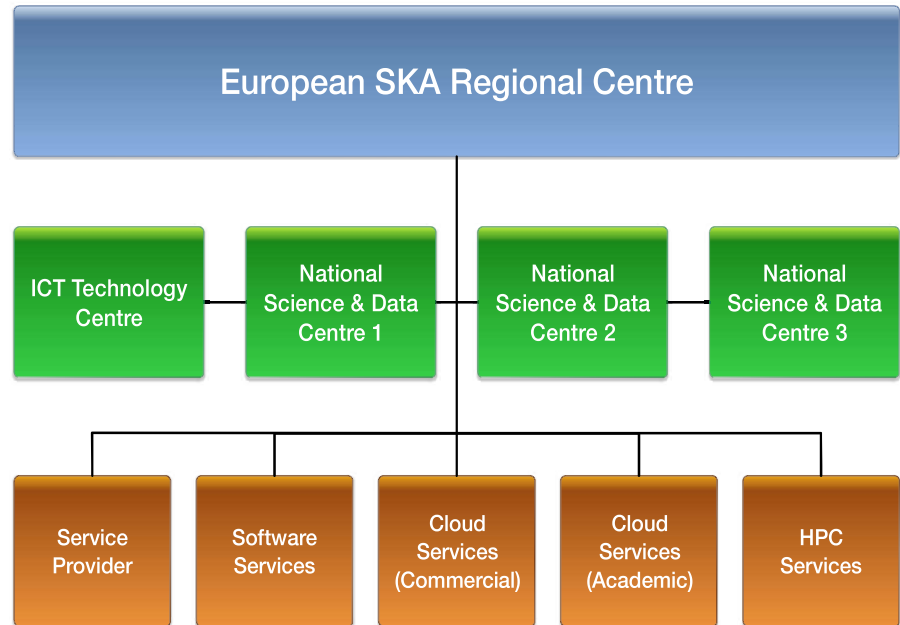

*EC Horizon 2020 (€3 million)*

*13 countries, 28 partners, SKAO, host countries, e-infrastructures (EGI, GÉANT, RDA), NREN's*

*Three year project (2017-2019)*

- Governance Structure and Business Models
- Computing and Processing Requirements
- Data Transport and Optimal European Storage Topologies
- User Data Access and Knowledge Creation

- Create a European-scale, federated Regional Centre for the SKA
- Provide resources for SKA science extraction to users
- Coordination with ICT communities, industry, and service providers
- Facilitate shared development, interoperability, and innovation
- European counterpart for engagement with other SRCs internationally

- 
- Large and distributed global user community
  - Exascale computation and data management
  - Integration of global research infrastructures
  - Long-term development and operations
  - Sustainable funding models for common infrastructure
  - Clash of cultural mindsets (structured HPC versus interactive analysis)

Monthly Operational Cost

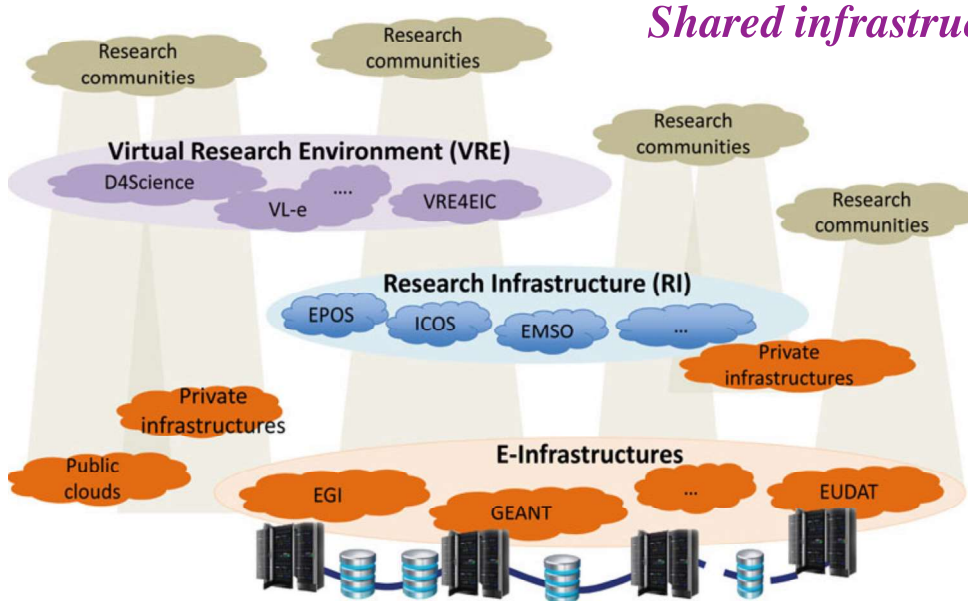

*“A centralized model saves money.”*

*“Never move the data.”*

**- Engineers**

- Research community is distributed
- Existing resources are distributed
- Need at least one archive backup
- Partners prefer investments in regional infrastructure
- Centralized model makes regional valorization difficult
- Can't afford to start from scratch!

*Shared infrastructure is a boundary condition, but there are issues:*

- Long-term curation
- Committed resources
- Analysis latency
- HPC culture shock
- Requires outside expertise
- Mechanism to harness community investments (personal grants, etc.)
- Preserve environment for discovery and innovation

*From "VRE in the Data for Science Approach to Common Challenges", Zhao, Martin, & Jeffery*

- Multiple perspectives....academic, agency, project, industry
- Difficult to establish, difficult to sustain over long project lifetime

# Open Questions

*How do we build and sustain large-scale research infrastructures that can support multiple domains?*

*How do we deploy science as a service to researchers and maintain the cycle of discovery and innovation?*

*How do we commodify public private partnerships?*
